

Extrasensory Perception Support, Skepticism, and Science

Edwin C. May and Sonali Bhatt Marwaha, Editors

This two-volume set introduces ESP—also known as anomalous cognition—and psychokinesis, addressing the history, research, philosophy, and scientific theories surrounding the phenomena. With contributions from leading research scientists from within the field of parapsychology and other areas of study, this reference addresses the fundamental questions that the evidence of ESP evokes; examines parapsychology research from all over the world; and explores the controversies, skepticism, and contemporary criticism disparaging the field.

Written for a multidisciplinary audience ranging from physicists to psychologists to lay persons, the volumes present the scientific validity of the field. Volume 1 addresses the historical, philosophical, skeptical, and research viewpoints; volume 2 lays out the current theories on ESP. Chapters reveal how strict scientific protocols and state-of-the-art technologies enable scientists—at sites such as Harvard and Cornell universities and their international counterparts in Amsterdam, Austria, and Asia—to pinpoint and investigate ESP

abilities. Appendices include a glossary of key terms in parapsychology, ESP research protocol, ESP research organizations, skeptic associations, and recommended reading.

Edwin C. May, PhD, is the president and founder of the Laboratories for Fundamental Research. Formerly, he was a director in the U.S. Government's secret ESP program popularly known as STARGATE.

Sonali Bhatt Marwaha is a research associate with the Laboratories for Fundamental Research.
